### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,497,674 to Steele et al. Steele discloses an apheresis apparatus with a rotatable centrifuge element with a channel for blood therein. The device further comprises an extracorporeal tubing circuit which brings blood from the donor to the centrifuge and a second tubing line that sends the separated component(s) out of the centrifuge for collection or therapy (see column 2). The device further comprises plasma collection bag 94 and platelet collection bags 84, pump-engaging blood inlet loop 132, and various processors that control operation of the entire system, including a graphical user interface for operator input, memory, calculators, and sensors (see columns 16-18, 51, 56, 59 FIG 2A). The controller is capable of adjusting the speed of the centrifuge (see column 37). With regard to applicant's claim limitations drawn to the operations of the controller, such limitations amount to a recitation of the intended use of the device. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. See MPEP 2114.

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- a. US 5,833,866 Brown
  - i. Blood collection system with in-process yield determination
- b. US 6,334,842 Hlavinka et al
  - ii. Centrifugal separation of blood components with variable rotor speed
- c. US 6,678,040 Suzuki
  - iii. Blood separation apparatus with online yield determination
